

APPS TO COVER

**The
CockPit**

Blackboard

**DropBox,
iClicker,
SageMath**

**GETMobile,
Transloc,
Grubhub**

TECH CHANGE

There are two apps that go with this. The CockPit and Gamecocks. They both manage sporting events. This could be a branch of a unified application.

Alot of Teachers use different applications to manage and track tasks. There needs to be 1 location to get your assignments.

Dropbox is less organized than blackboard. Both is not needed.

the app would start with GET. for quick access to your carolina card funds.

LABOR

In order to make this new app, and to keep it up and running, fixing bugs and issues, a good amount of workers would be needed

These workers would be coders, bug fixers, student group admin

help desk workers, it workers, customer support

Constant updates and maintenance of service will be needed to ensure that every student has a seamless experience from tuning in assignments to checking carolinacash

SHORTCUTS

This app would have to be accessible to all different kind of students, making shortcuts necessary

Shortcuts could include calendar, classes, grades, transportation, food, student events, etc.

A recently accessed page could be implemented as a shortcut to access parts of the app that the student uses repeatedly.

Making things easy to access through shortcuts could be extremely useful to students. Integrating shortcuts to resources the students often use could increase their productivity.

Misc

Having a clean UI that allows the student to access school resources all in one app allows for consolidation of their school related tasks.

The consolidation of all the student's school related tasks would reduce context switching, which could increase the student's efficiency in class and tracking school related items.

The app could be used to advertise events and businesses that are linked to the university. Getting payments and assigning tickets could be much more streamlined from this.

Calendar of events for every club and sport so people are always updated
